Education

Florida Atlantic University, *Ph.D. Candidate in Computer Science*, GPA: 4.0 / 4.0

Sept 2022 – August 2027

- **Advisor:** Prof. Zhen Ni and Prof. Xiangnan Zhong
- **Research Area:** Federated Learning, Reinforcement Learning, Large Language Models, and Computer Vision
- **Teaching Assistant:** CAP6629: Reinforcement Learning (Spring/Fall 2025); COT6405: Analysis of Algorithms (Spring/Fall 2024); CAP5625: Computational Foundations AI (Summer 2025)
- **Internship Availability:** Available for full-time internship during the entire year of 2026 under CPT authorization

Publications

Projects

Wearable Soft Magnetic Sensor Arrays for Robust Force Myogram Recognition in Prosthetic Hand Control 2025 - Present

- Building upon a soft magnetic FMG prosthetic sensing system for real-time muscle pattern recognition
- Developing algorithms to address sensor displacement and subject variability caused by different wearing positions
- Exploring cross domain adaptation methods to improve robustness and classification accuracy

Intelligent Data Analysis and Decision System for Construction Sites 2022

- Designed real-time safety compliance inspection functions using YOLO for detecting unsafe behaviors and warning signs
- Developed server-side video scheduling and parallel detection interfaces for multi-stream processing and early warning storage

Anti-Forgery Code Identification System for Cigarette Packaging 2021

- Developed a 32-bit CRNN-based recognition network for cigarette packaging anti-counterfeiting code (laser codes on transparent packaging) up to commercial standards
- Migrated PyTorch models (CRNN, CTPN, YOLO, DBNet) to NCNN via ONNX; optimized for C++ execution and cross-platform deployment
- Integrated C++ and Java through JNI for Android app and WeChat mini program deployment

Recognition System for Traditional Chinese Medicine Pieces 2021

- Built a ResNet-based classification and quality grading model for traditional Chinese medicine pieces
- Collected and cleaned dataset; improved model accuracy from 79% to 96.9% via augmentation and refinement
- Deployed network service for efficient mobile access

Big Data Safety Monitoring and Management System for Tourism 2019

- Enhanced SlowFast network for real-time violence recognition, improving accuracy by 5%
- Improved crowd counting accuracy by 30% through algorithm optimization for surveillance data
- Developed abnormal crowd behavior detection and real-time alert functions for high-risk scenes

Internship

Fushan Glass Art Company, Software Engineer June – Sept 2019

- Developed backend modules for the company ERP system using MySQL.
- Designed and optimized database schemas to support inventory and production workflows.
- Improved query efficiency and data consistency through stored procedures and indexing strategies.

Awards and honors

2024	Best Journal Publication from FAU College of Engineering & Computer Science
2023-2025	Academic Achievement from FAU College of Engineering & Computer Science
2021	2 nd Prize of the National Mathematical Contest in Modeling
2021	3 rd Prize of the Graduate Electronic Design Contest
2020	3 rd Prize of the National Mathematical Contest in Modeling
